

# Super Committers

Super committers are a group of **TOC-approved** individuals within the **O-RAN SC** community with the power to merge patches on behalf of projects during approved Release Activities.

Super committers are still affected by NACR Gerrit rules: <https://gerrit-review.googlesource.com/Documentation/prolog-cookbook.html#NonAuthorCodeReview>

This means that, even though super committers can +2/submit changes across repos, they will still not be able to bypass this rule for self authored changes.

## Super Committer Activities

Super committers are given super committer powers **ONLY** during TOC-approved activities and are not a power that is active on a regular basis. Once one of the TOC-approved activities are triggered, helpdesk will enable the permissions listed for the respective activities for the duration of that activity.

## Who can be super committers?

Anyone as long as it makes sense for the TOC.

It would seem useful to have super committers in more than one region so that they can help support testing/integration/merge activities across regions /time zones.

Approved Super Committers	Region / time zone
<a href="#">Jessica Gonzalez</a> (LF Support)	NAR (Pacific)
<a href="#">Matthew Watkins</a> (LF Support)	GMT
<a href="#">John Keeney</a>	
<a href="#">Martin Skorupski</a>	

## To request the permissions

- Provide a specific timeline of how long should the permissions be enabled for (Can't be enabled all the time)
- Get TOC approval
- Request the permissions to be turned on via [support.linuxfoundation.org](https://support.linuxfoundation.org)
