2020-01-13 Meeting notes - Joint OAM / NONRTRIC SCRUM meeting

See also:

Date

13 Jan 2020

Attendees

- John Keeney
- Martin Skorupski

- Tracy Van Brakle
- John Ng
- Lathishbabu Ganesan
- Alex Stancu
- user-ebe48
- Sonia Sangari
- Maxime Bonneau
- Some other people joined the call later ... please add yourself ...

Discussion

1. Further discussed Bronze HealthCheck use case - https://wiki.o-ran-sc.org/download/attachments/3604609 /RSAC_Bronze_HealthCheck_UseCase.docx from RSAC-Contributions
   a. Re Flow #3 - A1-based operations - we will implement a simple hello-world R-APP to step through the sequence of operations
      i. Actual operations may need to change a little as A1 interface stabilizes in coming weeks.
   b. OAM parts seem well under control based on existing functionality ... ref Martin Skorupski
   c. Could perhaps add some O1 observability - to combine NONRTRIC & OAM parts ... but maybe not for bronze - e.g A1 leads to a counter increase, or an FM message
      i. Martin: FM - there is some support for Alarm list etc in ONAP now ... **Action**: Martin Skorupski could you provide a little more detail / pointer to this?
      ii. Counter, etc - need ax X-APP to change something in a (simulated?) E2 node that we can observe?, or change something in near-RT-RIC platform (O1) observability? .... **Action**: John Keeney : need to liaise with near-RT-RIC team here
2. Bronze Traffic steering use case - https://wiki.o-ran-sc.org/download/attachments/3604609/RSAC_Bronze_Use%20Case-Traffic%20Steering% 20QoE.doc?api=v2 from from RSAC-Contributions
   a. Have serious concerns about the ability to implement this use case in Bronze timeframe, esp due to availability of required SMO functions ... likely to be a multi-release use case.
   b. Need to pick biteable chunks of the is use case where we could make progress in Bronze
   c. Tracy: Need to consider Slicing use case in Bronze timeframe. **Action** : Tracy Van Brakle Steering use case discussion in RSAC.
3. JIRA: All projects need to use JIRA more - NONRTRIC are fine with this
   a. Discussions ongoing currently in LFN Dev Forum in Prague about cross project use of JIRA, e.g. referencing JIRA task in different projects
   b. Suggest using ONAP model of design & discussion in wiki, with pointers to JIRA entries.
4. Martin: First start at a SMO profile for ONAP ... i.e. what are the key parts of ONAP required? (OOM?)
   a. John: This will probably be very dynamic ... in theory NONRTRIC & R-APPs can access everything .... will continue discussions here.
5. Tracy: Plan / possibility of SMO-related work in MANO - need to check alignment here **Action:** Tracy Van Brakle Can your please give a pointer to this work?
6. SIM: would like to move A1 stub (near-RT-RIC) into SIM project
   a. Will liaise with Alex Stancu
7. Dashboard/Portal Would like to find a home for A1 Policy Management dashboard
   a. Will liaise with Martin Skorupski to find the right place/person
