Network Measurement Data

Table of Contents

Sub pages

- gNMI

Scope

text

Terminology

- read-only from controller point of view
- state data
- measurement data - performance monitoring
- alarms (fault detection and is clearance - the ringing thing - detected condition) vs. fault (problem itself)
    - multi state thing - nicely degraded, failed (example temperature)
- thresholds

---

setter intend agreement (controller sourced data - 100% controller responsibility)

achievement - acceptance of the agreement

measurement : result of the achievement
