End-of-release tasks

1. Complete code upload/update
2. Double-check from [Code coverage reports](#) that all **blocker** code smells have been addressed as per RC-5 in [Release criteria checklist template](#)
3. If applicable, release binary artifact(s) such as docker container image(s), or libraries.
 - a. Instructions: [O-RAN Developer's Guide to CI Resources and Processes at the LF](#)
4. Update references to artifacts in the above table. Also fill in the last column with reference to the gerrit review that can be used to regenerate the artifact.
5. Update release notes: Make sure you have a release summary as per RC-1 in [Release criteria checklist template](#): "every component must update their rst release notes (in the doc subfolder in the repo)". Based on this per-component description, the PTL will create a release summary.
 - a. Release Notes must be published to <https://docs.o-ran-sc.org/en/latest/>
 - b. Instructions for setting up documentation folder for repo: <https://wiki.o-ran-sc.org/display/DOC/Configure+Repo+for+Documentation>
6. After finishing all the above, branch "dawn" (all lower case).
 - a. Repo owners (committers) can create branch.
 - b. There are several ways to create branch. For example do this: Login to web UI <https://gerrit.o-ran-sc.org/r/admin/repos> > Find repo, click on repo name > "Branches" in left panel > "Create New"
