

G Release - Docker Images

Images

The images used for running the Non-RT RIC can be selected from the table below depending on if the images are built manually (snapshot image) or if release images shall be used.

In general, there is no need to build the images manually unless there are code changes made by the user, so release images should be used. Instruction on how to build all components, see. [Release G - Build](#).

The run commands throughout this page uses the **release** images and tags. Replace the release images/tags in the container run commands in the instructions if manually-built snapshot images are desired.
